252 Laketown, Kolkata 700089, India.

October, 2015

List of chapters

1. Introduction
2. Vectors
3. Mechanics
4. Simple Harmonic Motion
5. Gravitation
6. Elasticity
7. Mechanics of fluids
8. Thermal Physics
9. Wave motion I: Acoustic waves
10. Ray Optics
11. Electrostatics
12. Electricity I: Steady currents and their magnetic effects
13. Electricity II: Varying and alternating currents
14. Wave motion II: Electromagnetic waves
15. Wave Optics
16. Quantum theory

-
17. Relativity: the special and the general theory
 18. Atoms, Nuclei, and Molecules
 19. Electronics

Contents

1 Introduction	1
1.1 Physical quantities and their units	1
1.2 Systems of units: the SI system	3
1.2.1 Relations among physical quantities, and their units	3
1.2.2 The dimension of a physical quantity	4
1.3 Basic and derived units	5
1.4 SI units, and dimensions	7
1.4.1 The seven base units	7
1.4.2 Dimensions related to units	10
1.4.3 Derived units: selected physical quantities	12
1.4.4 Units and dimensions of a few physical constants .	18
1.4.5 Prefixes denoting multiples and submultiples	22
1.5 Other systems of units	22
1.5.1 Systems of units other than the SI system	22
1.5.2 Conversion from the SI to other systems of units . .	23
1.5.3 A few convenient non-SI units	24
1.6 Dimensional analysis	25
1.6.1 Principle of dimensional homogeneity	27
1.6.2 An application: Stokes' formula for viscous drag force	28

CONTENTS

1.6.3	The principle of similarity	30
1.7	Physical quantities as scalars and vectors	33
2	Vectors	37
2.1	Introduction	37
2.1.1	Equality of two vectors	39
2.1.2	Magnitude of a vector xxxxxxxxxxxxxxxx xxxxxxxxxxxxxxxx xxxxxxxx xxxxxxxxxxxxxxxxxxxxxxxx	41
2.1.3	The null vector	41
2.2	Operations with vectors	42
2.2.1	Addition of vectors	42
2.2.1.1	Addition of two vectors	42
2.2.1.2	Addition of more than two vectors	43
2.2.2	Multiplication of a vector with a scalar	44
2.2.3	Features of vector addition and scalar multiplication	46
2.3	Unit vector	48
2.4	Scalar product of two vectors	49
2.4.1	Features of scalar product	51
2.4.2	Orthonormal triads of vectors	52
2.5	Cartesian components of a vector	54
2.5.1	Two dimensional vectors	56
2.5.2	Vector operations in terms of Cartesian components	57
2.5.3	Scalar product of two vectors in Cartesian compo- nents	58
2.5.4	Direction cosines relating to a unit vector	59

CONTENTS

2.6	The vector product of two vectors	61
2.6.1	Features of the vector product	62
2.6.2	Vectorial expression for a planar area	64
2.7	Scalar and vectorial components of a vector	66
2.8	The right hand rule	69
2.9	Transformation of vectors	71
2.10	Scalar and vector triple products	74
2.10.1	Scalar triple product	74
2.10.2	Vector triple product	76
2.11	Vectorial function of a scalar variable	78
2.11.1	The derivative of a vector function	79
2.12	Scalar function of a vector variable: scalar field	81
2.12.1	The position vector	81
2.12.2	Scalar function of the position vector: scalar field	82
2.13	Vector function of a vectorial variable: vector field	84
2.14	Derivatives and integrals of scalar and vector fields	85
2.14.1	Derivatives of scalar and vector fields	85
2.14.2	Volume-, surface-, and line integrals	86
3	Mechanics	92
3.1	Introduction: frames of reference	92
3.2	Motion of a single particle	95
3.2.1	Introduction	95
3.2.2	Kinematic quantities	98
3.2.2.1	The position vector and its time dependence	99
3.2.2.2	Displacement	99

CONTENTS

3.2.2.3	Velocity	101
3.2.2.4	Speed	103
3.2.2.5	One- and two dimensional motions	104
3.2.2.6	Momentum	106
3.2.2.7	Kinetic energy	107
3.2.2.8	Acceleration	107
3.3	Newton's laws of motion: Introduction	110
3.4	Inertial frames. Newton's first law.	111
3.5	Newton's second law: Equation of motion	112
3.5.1	The concept of force	112
3.5.2	The second law	113
3.5.3	Equation of motion	114
3.5.4	The line of action of a force	118
3.5.5	The resultant of a number of forces	119
3.5.6	Forces in equilibrium	121
3.6	Motion along a straight line	122
3.7	Motion in a plane	128
3.8	Field of force	132
3.9	Transformations from one frame of reference to another	133
3.9.1	Transformation of velocity	134
3.9.2	Relative velocity	136
3.9.3	Transformations of displacement and time	138
3.9.4	Transformation of acceleration	140
3.10	Equations of motion in different frames of reference	141
3.10.1	Characterization of the inertial frames	141
3.10.2	Equations of motion of a particle in inertial frames	142

CONTENTS

3.10.3	Equation of motion in a non-inertial frame	144
3.11	Mechanics of a single particle: overview	147
3.12	Force and work	150
3.13	Work in one dimensional motion. Potential energy.	154
3.14	Kinetic energy in one dimensional motion	160
3.15	Kinetic energy, potential energy, and work	163
3.15.1	Kinetic energy and work	163
3.15.2	Potential energy. Conservative force-fields.	164
3.15.3	Conservation of energy	168
3.15.4	Work and energy: summary	168
3.15.5	Energy as ability to perform work	172
3.15.6	Conservation of energy: a broader view	176
3.16	Mechanics of a system of particles	181
3.16.1	Internal and external forces. Equations of motion.	181
3.16.2	Newton's third law	182
3.16.3	Centre of mass of a system of particles	184
3.16.3.1	The position and velocity of the centre of mass	184
3.16.3.2	Centre of mass momentum	187
3.16.3.3	Determination of the centre of mass	188
3.16.4	System of particles: centre of mass motion	191
3.16.5	Principle of conservation of momentum	194
3.16.6	System of particles: principle of conservation of en- ergy	195
3.16.7	Elastic and inelastic collisions	197
3.16.7.1	Introduction	197

CONTENTS

3.16.7.2	Elastic and inelastic processes	198
3.16.7.3	The energy balance equation	201
3.16.7.4	Momentum balance	203
3.16.7.5	Relative velocities: normal and tangential	203
3.16.7.6	The centre of mass frame	205
3.16.7.7	Describing the collision process	206
3.16.7.8	'Head-on' collision	207
3.16.7.9	Elastic collisions in planar motion	211
3.16.8	Impulse. Impulsive forces.	216
3.16.8.1	Impulse of a force or of a system of forces	216
3.16.8.2	Impulsive forces	219
3.17	Newton's laws and action-at-a-distance	223
3.18	Angular motion	225
3.18.1	Angular velocity of a particle about a point	225
3.18.2	Angular velocity about an axis	228
3.18.3	Circular motion	231
3.18.4	Centripetal acceleration	235
3.18.4.1	Uniform circular motion	235
3.18.4.2	Motion along a space curve	240
3.18.5	Radial and cross-radial accelerations in planar mo- tion	243
3.18.6	Angular momentum	246
3.18.6.1	Angular momentum about a point	246
3.18.6.2	Angular momentum about an axis	247
3.18.6.3	Angular momentum in circular motion	249

CONTENTS

3.18.7	Moment of a force	250
3.18.7.1	Moment of a force about a point	250
3.18.7.2	Moment of a force about an axis	253
3.18.7.3	Impulse of a torque	255
3.18.8	Angular motion of a system of particles	256
3.18.9	Principle of conservation of angular momentum	258
3.18.10	Rotational motion about an axis: moment of inertia	260
3.18.11	Work done in rotational motion	267
3.18.12	Potential energy in rotational motion	269
3.18.13	Calculation of moments of inertia	270
3.18.13.1	The theorem of perpendicular axes	271
3.18.13.2	The theorem of parallel axes	272
3.18.13.3	Additivity of moments of inertia	274
3.18.13.4	Moments of inertia: examples	275
3.19	Motion of rigid bodies	285
3.19.1	Translational and rotational motion of rigid bodies	285
3.19.2	Rolling motion	290
3.19.3	Precession	297
3.19.3.1	Precession under an applied torque	297
3.19.3.2	Precession of a heavy top	300
3.19.3.3	Precession of the earth's axis of rotation	301
3.19.3.4	Free precession	304
3.20	Rotating frames of reference	305
3.21	Reduction of a system of forces	311
3.21.1	Introduction	311
3.21.1.1	Concurrent forces	311

CONTENTS

3.21.1.2	Non-concurrent forces	312
3.21.2	Concurrent systems in equilibrium	313
3.21.2.1	Two concurrent forces in equilibrium . . .	313
3.21.2.2	Three concurrent forces in equilibrium . .	314
3.21.2.3	More than three concurrent forces	316
3.21.2.4	Moment of concurrent forces in equilibrium	318
3.21.3	Reduction of a system of forces acting on a rigid body	319
3.21.3.1	Reduction of a pair of like parallel forces .	320
3.21.3.2	Unlike and unequal parallel forces	321
3.21.3.3	Equal and unlike parallel forces : couple .	322
3.21.3.4	Composition of couples	328
3.21.3.5	A couple and a force in a parallel plane .	329
3.21.3.6	Reduction of a system of co-planar forces	330
3.21.3.7	Reduction of non-coplanar forces: wrench	332
3.22	Static and dynamic friction	334
3.22.1	Introduction	334
3.22.2	Static friction	336
3.22.3	Dynamic friction	338
3.22.4	The mechanism underlying friction	344
3.22.5	Wet friction and lubrication	353
3.22.6	Rolling friction	354
3.23	Motion of a wheel under driving	360
3.23.1	Driving by means of a couple	361
3.23.2	Driving by means of a force	365

CONTENTS

4 Simple Harmonic Motion	369
4.1 Oscillatory motion	369
4.1.1 Simple harmonic motion	370
4.1.1.1 The equation of motion	370
4.1.1.2 Solving the equation of motion	372
4.1.1.3 General and particular solutions	374
4.1.1.4 Relating the solution to initial conditions .	375
4.1.1.5 Periodicity of motion	377
4.1.1.6 The phase	378
4.1.1.7 The amplitude	379
4.1.1.8 Graphical representation of the motion . .	381
4.2 Energy in simple harmonic motion	382
4.2.1 Potential energy	382
4.2.2 Kinetic energy in simple harmonic motion	385
4.3 Simple harmonic oscillations of physical quantities	387
4.3.1 Angular oscillations	390
4.4 The pendulum and the spring	393
4.4.1 The simple pendulum	393
4.4.2 The spring	397
4.5 Damped simple harmonic motion	401
4.5.1 Damped SHM: equation of motion	401
4.5.2 Damped SHM: general solution	403
4.5.3 Underdamped and overdamped motions	404
4.5.3.1 Underdamped SHM	404
4.5.3.2 Overdamped SHM	407
4.5.4 Damped SHM: dissipation of energy	408

CONTENTS

4.6	Forced SHM	410
4.6.1	Energy exchange in forced SHM. Resonance.	416
5	Gravitation	421
5.1	Introduction: Newton's law of gravitation	421
5.1.1	Principle of superposition	424
5.2	Gravitational intensity and potential	426
5.2.1	Gravitational intensity	426
5.2.2	Gravitational potential	431
5.2.3	Gravitational potential: summary	433
5.2.4	'Potential at infinity'.	434
5.2.5	Potential due to a point mass	435
5.2.6	Potential due to a number of point masses	436
5.2.7	Describing a gravitational field	438
5.3	Gauss' principle in gravitation	440
5.3.1	Flux of gravitational intensity	440
5.3.2	Gauss' principle	442
5.3.3	Application: a spherically symmetric body	443
5.3.3.1	Intensity and potential at an external point	445
5.3.3.2	A spherical shell	446
5.3.3.3	Two non-overlapping spherical bodies	450
5.4	Earth's gravitational field: acceleration due to gravity	452
5.4.1	Earth's gravitational field	452
5.4.2	Centre of gravity	456
5.4.3	The weight of a body	458
5.4.3.1	Weight as a force of reaction: weightlessness	459

CONTENTS

5.4.3.2	Weight reduction due to earth's rotation	462
5.4.4	Escape velocity	464
5.5	The motion of planetary bodies	466
5.5.1	Introduction	466
5.5.2	The equation of motion and the nature of trajectories	468
5.5.3	Kepler's laws	471
5.5.4	Circular orbits in an inverse square field	474
5.5.5	Tidal force	476
5.5.6	The orbit of the moon	479
5.5.7	The motion of a projectile	482
5.6	Gravitation: a broader view	483
6	Elasticity	488
6.1	Introduction: External and internal forces in a body	488
6.2	Strain and stress	490
6.3	Quantitative definition of strain: strain parameters	492
6.3.1	Tensile strain	495
6.3.2	Bulk strain	498
6.3.3	Shear strain	499
6.3.4	Mixed strain	501
6.3.5	Principal axes. Principal components of strain.	502
6.4	Stress in a deformable body	504
6.4.1	Tensile stress	507
6.4.2	Shear stress	508
6.4.3	Bulk stress	509
6.4.4	Mixed stress: principal components of stress	510

CONTENTS

6.5	Stress-strain curve	510
6.5.1	A wire with a load: the elastic limit	510
6.5.2	The curve: principal features	512
6.5.3	Elastic and plastic deformations	514
6.6	Stress-strain relations: elastic coefficients	520
6.6.1	Young's modulus	521
6.6.2	Poisson's ratio	523
6.6.3	Modulus of rigidity	527
6.6.4	Bulk modulus	529
6.6.5	Principle of superposition	529
6.6.6	Relations between the elastic constants	531
6.6.7	Elastic properties of fluids	532
6.7	Strain energy	535
7	Mechanics of Fluids	540
7.1	Introduction: the three states of matter	540
7.2	Internal forces in a fluid: pressure	543
7.3	Pressure in an incompressible liquid	546
7.4	Thrust of a fluid	550
7.5	Atmospheric pressure	555
7.6	Buoyancy: Archimedes' Principle	558
7.7	Condition of floatation	559
7.8	Pascal's law: transmission of pressure	566
7.9	The siphon	570
7.9.1	Bernoulli's principle	572
7.9.2	Working of the siphon	577

CONTENTS

7.10	Surface energy and surface tension	582
7.10.1	Introduction	582
7.10.2	Surface energy and surface tension	584
7.10.3	The tendency of a liquid surface to shrink	588
7.10.4	Surface tension as lateral force	589
7.10.5	Angle of contact	591
7.10.6	Pressure difference across a curved liquid surface	595
7.10.7	Capillary rise	598
7.10.8	A few phenomena associated with surface tension	600
7.11	Viscosity and fluid flow	608
7.11.1	Introduction	608
7.11.2	Newton's formula for viscous force	609
7.11.2.1	Kinematic viscosity	612
7.11.2.2	Variation of viscosity with temperature	613
7.11.3	Transport of momentum	613
7.11.4	Laminar and turbulent flow	617
7.11.5	Non-Newtonian fluids	618
7.11.6	Poiseuille's flow	620
7.11.7	Stokes' formula for viscous drag	624
7.11.8	The origin of the viscous force: a brief outline	626
7.11.8.1	Viscosity of fluids: an overview	628
7.11.9	The drag force	631
7.11.10	Reynolds number and turbulence	633

CONTENTS

8 Thermal Physics	636
8.1 Thermodynamic systems and their interactions	636
8.1.1 Adiabatic enclosures. Work.	637
8.1.2 Diathermic enclosures. The concept of heat.	638
8.1.3 Examples of adiabatic and diathermic enclosures	639
8.2 Thermodynamic equilibrium	640
8.3 Thermodynamic processes	642
8.3.1 Adiabatic process	642
8.3.2 States and processes: thermodynamic state diagram	643
8.3.3 Quasi-static processes	644
8.3.4 Thermal equilibrium	645
8.4 The zeroth law of thermodynamics. Temperature.	646
8.4.1 Explaining the zeroth law	646
8.4.2 Temperature as a thermodynamic variable	647
8.4.3 Empirical scales of temperature	648
8.4.4 The SI scale of temperature	651
8.4.5 The direction of heat flow	652
8.4.6 Thermal reservoir: heat source and heat sink	653
8.4.7 Isothermal processes	654
8.5 Adiabatic processes between given states	656
8.6 The significance of adiabatic work	658
8.7 The quantitative definition of heat	662
8.7.1 Equivalence of heat and work	664
8.7.2 Work performed by a gas in a quasi-static process	664
8.7.3 Summary of the first law.	670
8.8 Intensive and extensive variables	674

CONTENTS

8.9	The kinetic theory of gases	676
8.9.1	Macroscopic and microscopic descriptions	676
8.9.2	Mole number	679
8.9.3	The ideal gas	680
8.9.4	Pressure of a gas in kinetic theory	681
8.9.5	Kinetic interpretation of temperature.	689
8.9.6	The ideal gas equation of state	692
8.9.6.1	Ideal gas: isothermal and adiabatic processes	696
8.9.7	Random motion of molecules. Molecular collisions.	699
8.9.8	Brownian motion	702
8.9.9	Mean speed and most probable speed	704
8.9.10	Partial pressure	707
8.10	The entropy principle	709
8.11	Statistical physics: Boltzmann's formula	715
8.11.1	The statistical interpretation of entropy	717
8.12	Heat engines	719
8.12.1	Explaining the idea of a heat engine	719
8.12.2	The efficiency of a heat engine	721
8.12.3	An ideal heat engine: the Carnot cycle	723
8.12.4	The absolute scale of temperature	728
8.12.5	Scales of temperature: summary	730
8.12.6	The Rankine cycle	731
8.12.7	The Otto and Diesel cycles	734
8.12.7.1	The Otto cycle	735
8.12.7.2	The Diesel cycle	737

CONTENTS

8.12.8	Refrigeration	739
8.13	Thermal expansion of solids, liquids, and gases	743
8.14	Thermal expansion of solids	746
8.14.1	Coefficients of expansion of a solid	746
8.14.2	Relation between the three coefficients for a solid	748
8.14.3	Instances of thermal expansion of solids	751
8.15	Thermal stress	752
8.16	Thermal expansion of liquids	755
8.16.1	Apparent expansion and real expansion of a liquid	755
8.16.2	The anomalous expansion of water	759
8.17	Thermal expansion of gases	761
8.18	Calorimetry	764
8.18.1	Thermal capacities of bodies	764
8.18.2	Specific heats of substances	766
8.18.3	Specific heats of an ideal gas	768
8.18.4	Adiabatic and isothermal expansion of gases	772
8.18.5	The fundamental principle of calorimetry	775
8.19	Change of state: phase transition	779
8.19.1	Change of state as phase transition	779
8.19.2	Transition temperature. Latent heat	782
8.19.3	Dependence of transition temperature on the pressure	785
8.19.4	Saturated vapour	787
8.19.5	The coexistence curve. Triple point.	787
8.19.6	Gas and vapour	791
8.19.7	Saturated air	792

CONTENTS

8.19.8	Saturation pressure and superincumbent pressure	793
8.19.9	Evaporation	795
8.19.10	Relative humidity	798
8.19.11	Dew Point	799
8.20	Transmission of heat	801
8.20.1	Conduction	801
8.20.1.1	Thermal conductivity	804
8.20.1.2	Thermal diffusivity	808
8.20.1.3	Stationary and non-stationary heat flow .	808
8.20.2	Convection	812
8.20.2.1	Natural and forced convection	814
8.20.3	Thermal radiation	815
8.20.3.1	Stefan's law of radiation	819
8.20.3.2	Energy exchange in radiative transfer . . .	822
8.20.3.3	Kirchhoff's principle	825
8.20.3.4	Newton's law of cooling	827
8.20.3.5	The greenhouse effect	830
8.21	Supplement: Random variables and probability distributions	834
9	Wave motion I: Acoustic waves	839
9.1	Simple harmonic oscillations of physical quantities	839
9.2	Oscillations transmitted through space: waves	841
9.3	Sound waves as variations in pressure. Elastic waves.	844
9.4	Sound waves in one dimension	847
9.4.1	Variation of excess pressure	847
9.4.2	Propagation of the monochromatic wave	850

CONTENTS

9.5	Waves in three dimensions	855
9.5.1	The plane progressive wave	855
9.5.2	Waves of more general types	858
9.5.3	The principle of superposition	858
9.6	The wave equation	860
9.7	Sources and boundary conditions	862
9.7.1	The monopole source. Spherical wave.	862
9.7.2	Dipole and quadrupole sources	865
9.7.3	Sources and wave patterns: summary	869
9.8	Reflection and refraction of plane waves	870
9.9	Diffraction and scattering by obstacles	875
9.9.1	Finite extent of interface	875
9.9.2	Curvature of the interface	877
9.9.3	Wave incident on an uneven surface	878
9.10	Echo and reverberation of sound	880
9.10.1	Echo	880
9.10.2	Reverberation.	883
9.11	Velocity, energy density, and intensity	886
9.11.1	Formulation of the problem	886
9.11.2	Displacement and strain	890
9.11.3	Velocity of sound in a fluid	892
9.11.3.1	Velocity of sound in an ideal gas	894
9.11.3.2	Pressure, temperature, and humidity	897
9.11.4	Energy density and intensity	899
9.12	Ultrasonic waves	904

CONTENTS

9.13	Doppler effect	906
9.13.1	Introduction	906
9.13.2	Frequency related to rate of change of phase	911
9.13.3	The general formula	912
9.13.4	Uniform motions of source and observer	913
9.14	Supersonic objects and shock waves	920
9.15	Superposition effects	923
9.15.1	Interference	923
9.15.2	Standing waves	930
9.15.2.1	Standing waves in an air column	930
9.15.2.2	Features of a standing wave	931
9.15.2.3	Superposition of propagating waves	934
9.15.2.4	A few points of distinction	935
9.15.2.5	Modes of standing waves in an air column	937
9.15.3	Beats	940
9.15.4	Wave packets: group velocity	943
9.16	Vibrations of strings and diaphragms	946
9.16.1	Transverse vibrations of stretched strings	947
9.16.2	Vibrations of stretched diaphragms	955
9.16.3	Musical instruments	959
9.17	Loudness, pitch, and quality of sound	961
9.18	Elastic waves in solids	963
9.18.1	Vibrations in a crystalline medium: normal modes	963
9.18.2	Elastic waves in an isotropic solid	965

CONTENTS

10 Ray Optics	969
10.1 Introduction	969
10.2 Ray optics: basic principles	971
10.3 Image formation by rays originating from a point source	984
10.4 Image formation by reflection at a plane surface	988
10.5 Refraction at a plane surface	992
10.5.1 Image formation	992
10.5.2 Refraction through a layer with parallel surfaces	1000
10.6 Total internal reflection	1001
10.7 Prism	1006
10.7.1 Basic formulas	1007
10.7.2 Deviation	1009
10.7.3 Minimum deviation	1011
10.8 Reflection and refraction at spherical surfaces	1014
10.8.1 Spherical mirrors: a few definitions	1014
10.8.2 Refraction at a spherical surface: definitions	1020
10.9 Sign convention in ray optics	1022
10.10 Image formation in reflection by a spherical mirror	1028
10.10.1 Focal length of a spherical mirror	1028
10.10.2 Aperture	1030
10.10.3 Relation between object distance and image distance	1032
10.10.3.1 Image for an off-axis object point	1037
10.10.3.2 Image formation for short extended objects	1039
10.11 Image formation by refraction at a spherical surface	1040
10.11.1 Image formation for a point object on the axis	1043
10.11.2 Image formation for a short extended object	1049

CONTENTS

10.12	Spherical lens	1051
10.12.1	Image formation by a thin lens	1059
10.12.2	Real and virtual image formation by a convex lens	1067
10.12.3	Image formation for off-axis points	1068
10.12.4	Longitudinal and transverse magnifications	1071
10.12.5	Angular magnification	1074
10.12.6	Minimum distance between object and real image	1076
10.13	Combination of thin lenses	1078
10.13.1	Equivalent lens	1081
10.13.2	Thin lenses in contact	1083
10.14	Aberrations in image formation	1084
10.14.1	Monochromatic and chromatic aberrations	1087
10.14.2	Types of monochromatic aberration	1088
10.14.3	Aberrations: an overview	1089
10.14.4	Correcting an optical system for aberrations	1090
10.15	The human eye	1091
10.16	Optical instruments	1094
10.16.1	The camera	1094
10.16.2	The telescope and the compound microscope	1097
10.16.2.1	The telescope	1098
10.16.2.2	The compound microscope	1100
11	Electrostatics	1104
11.1	Introduction: elementary charges	1104
11.2	Acquisition of charges by bodies	1107
11.2.1	Transfer of elementary charges	1107

CONTENTS

11.2.2	Contact electrification and contact potential	1110
11.3	Electrostatic force between charges	1112
11.3.1	Coulomb's law	1112
11.3.2	The principle of superposition	1116
11.4	Electrical field intensity and potential	1118
11.4.1	Electrical field intensity	1118
11.4.2	Electrical potential	1121
11.4.3	Electrical potential: summary	1124
11.4.4	Potential 'at infinity'	1125
11.4.5	Potential due to a point charge	1128
11.4.6	Potential due to a number of point charges	1130
11.4.7	Deriving the intensity from the potential	1132
11.5	Electric dipole and dipole moment	1136
11.5.1	A pair of equal and opposite point charges	1136
11.5.2	Dipole moment and dipole	1139
11.5.3	Torque and force on a dipole in an electric field	1146
11.5.3.1	Torque on a dipole	1146
11.5.3.2	Force on a dipole	1148
11.5.4	Potential energy of a dipole in an electric field	1149
11.6	Electrical lines of force and equipotential surfaces	1153
11.6.1	Geometric description of an electric field. Neutral points.	1153
11.6.2	Characteristics of lines of force	1156
11.6.3	Equipotential surfaces	1159
11.6.4	Density of lines of force. Tubes of force.	1161
11.6.5	Separations between equipotential surfaces	1164

CONTENTS

11.7 Gauss' principle in electrostatics	1165
11.7.1 Flux of electrical intensity	1165
11.7.2 Gauss' principle	1167
11.7.2.1 Flux due to a single point charge	1169
11.7.2.2 Solid angle	1169
11.7.2.3 Gauss' principle: derivation	1173
11.8 Applications of Gauss' principle	1174
11.8.1 A charged spherical conductor	1174
11.8.2 A spherically symmetric charge distribution	1177
11.8.3 Potential energy of a uniformly charged sphere	1179
11.8.4 An infinitely long cylindrical conductor	1181
11.8.5 An infinitely extended planar sheet of charge	1183
11.9 Conductors and dielectrics	1186
11.9.1 Free and bound electrons	1186
11.9.2 Electric intensity and charge density within a con- ductor	1187
11.9.3 Conductor: surface charge density.	1189
11.9.3.1 Electric intensity on the surface of a con- ductor	1192
11.9.4 Accumulation of charge at sharp points	1194
11.9.5 Polarization in a dielectric medium	1198
11.9.5.1 The polarization vector. Electric suscepti- bility.	1199
11.9.5.2 Electric intensity and the displacement vec- tors	1201

CONTENTS

11.9.5.3	Field variables: the question of nomenclature	1203
11.9.5.4	Electric field in a dielectric: summary . . .	1204
11.9.5.5	Field variables as space- and time averages	1205
11.9.5.6	A brief note on relative permittivity	1206
11.10	Capacitors and capacitance	1207
11.10.1	Charges and potentials on a pair of conductors . . .	1207
11.10.2	Capacitance of a pair of conductors	1211
11.10.3	The spherical condenser	1212
11.10.4	A pair of concentric spherical conductors	1213
11.10.5	Capacitance of a single conductor	1216
11.10.6	Self capacitance and mutual capacitance	1217
11.10.7	The parallel plate capacitor	1219
11.10.7.1	Charge distribution in the plates	1220
11.10.8	Energy of a system of charged conductors	1223
11.10.8.1	Energy of a single charged conductor . . .	1223
11.10.8.2	Energy of a charged parallel plate capacitor	1226
11.10.8.3	Electric field energy	1227
11.10.9	Capacitors in series and parallel	1227
11.10.10	Capacitors with dielectrics	1233
11.11	The potential of the earth	1236
12	Electricity I: Steady currents and their magnetic effects	1240
12.1	Electrical Cells	1240
12.1.1	The half cell	1240

CONTENTS

12.1.2	Electrochemical cell	1242
12.1.2.1	Half-cell potential	1242
12.1.2.2	Electromotive force of an electrochemical cell	1244
12.1.2.3	The Galvanic cell	1244
12.1.2.4	The electrolytic cell	1247
12.1.2.5	Primary and secondary cells	1250
12.2	Electrical conductors and electric current	1253
12.3	Current set up by a Galvanic cell	1260
12.4	Ohm's law. Electrical units	1266
12.4.1	Current density and current	1266
12.4.2	Resistance and resistivity	1268
12.4.3	Temperature dependence of resistivity	1274
12.5	Steady current in a conductor produced by an electrical cell	1276
12.5.1	Transformation of energy	1276
12.5.2	The pathway of energy flow	1282
12.5.3	Electromotive force (EMF) and source of EMF	1285
12.5.4	Heating effect of current: Joule's law of heating	1291
12.5.5	Summary: electrical cells, EMFs, and currents	1294
12.6	Series and parallel combination of resistances	1297
12.6.1	The laws of series and parallel combination	1297
12.6.2	Voltage division and current division	1302
12.6.2.1	Voltage division	1302
12.6.2.2	Current division	1305
12.7	Analysis of DC electrical circuits	1306
12.7.1	Kirchhoff's principles	1307

CONTENTS

12.8	The magnetic effect of currents	1313
12.8.1	Force between currents from elementary forces . .	1314
12.8.2	Force between a pair of parallel current-carrying wires	1317
12.8.3	Magnetic field intensity	1319
12.8.4	The force on a moving charge in a magnetic field . .	1323
12.8.5	Field variables: the question of nomenclature	1325
12.8.6	Field due to a current loop. Principle of superposi- tion.	1326
12.8.6.1	Magnetic lines of force	1330
12.8.6.2	Intensity due to a straight wire	1331
12.8.6.3	Infinitely long and straight wire	1333
12.8.6.4	Magnetic intensity due to a circular wire .	1336
12.8.6.5	Magnetic field of a solenoid	1339
12.8.7	Ampere's circuital law	1344
12.8.7.1	Applications of the circuital law	1347
12.8.8	The magnetic dipole	1351
12.8.8.1	Electric and magnetic dipole moments . .	1353
12.8.8.2	Current loop: a surface distribution of dipoles	1356
12.8.8.3	Torque and force on a magnetic dipole . .	1359
12.8.8.4	Energy of a magnetic dipole in a magnetic field	1361
12.8.9	Magnetic field: comparison with electrostatics . . .	1362
12.8.10	Currents and magnetic fields: overview	1364
12.9	Magnetic properties of materials	1368
12.9.1	Magnetization in a material body	1370

CONTENTS

12.9.2	Magnetic susceptibility and magnetic permeability .	1371
12.9.2.1	Field variables as space- and time averages	1374
12.9.3	Dia- and paramagnetism	1375
12.9.3.1	Paramagnetism	1375
12.9.3.2	Diamagnetism	1382
12.9.4	Ferromagnetism	1387
12.9.4.1	Spontaneous magnetization	1387
12.9.4.2	Magnetic domains	1390
12.9.4.3	The magnetization curve: hysteresis	1392
12.9.4.4	Residual magnetism: permanent magnets	1394
12.9.4.5	Transition to paramagnetic behaviour . . .	1397
12.10	The earth as a magnet: geomagnetism	1399
12.11	The chemical effect of current	1403
12.11.1	Electrolytes and electrolysis	1403
12.11.2	Faraday's laws of electrolysis	1405
12.12	Thermoelectric effects	1407
13	Electricity II: Varying and alternating currents	1410
13.1	Introduction	1410
13.2	Electromagnetic induction	1413
13.2.1	Magnetic flux	1415
13.2.2	Faraday's law of electromagnetic induction	1418
13.2.2.1	Lenz's law	1420
13.2.2.2	Motional EMF	1422

CONTENTS

13.2.3	Principle of DC and AC generators	1426
13.2.3.1	Conducting frame rotating in a magnetic field	1428
13.2.3.2	Rotating magnetic field: AC motors	1432
13.2.4	The principle of DC motors. Back EMF.	1437
13.2.4.1	DC motor: back EMF	1440
13.2.5	Self inductance	1444
13.2.5.1	Self inductance of a long solenoid	1445
13.2.5.2	Self inductance of a toroidal solenoid	1446
13.2.5.3	Inductor	1447
13.2.5.4	Back EMF in an inductor	1449
13.2.6	Mutual inductance	1449
13.3	Varying currents in electrical circuits	1452
13.3.1	Currents and voltages in an L - R circuit	1454
13.3.1.1	Growth of current	1454
13.3.1.2	Decay of current	1458
13.3.2	Currents and voltages in a C - R circuit	1460
13.3.2.1	Growth of charge	1460
13.3.2.2	Decay of charge	1462
13.3.3	Oscillations in an L - C - R circuit	1463
13.4	Magnetic field energy	1466
13.5	Alternating currents	1470
13.5.1	Mathematical description of AC currents and voltages	1470
13.5.1.1	Amplitude, frequency, and phase	1471
13.5.1.2	Root mean squared values	1472
13.5.1.3	The complex representation of AC quantities	1473

CONTENTS

13.5.2	An L - C - R circuit with an AC source	1476
13.5.3	Impedance	1482
13.5.4	Analysis of AC circuits	1486
13.5.5	Power in an AC circuit	1490
13.5.6	The three-phase supply	1494
13.5.7	The transformer	1501
13.5.7.1	Back EMFs	1503
13.5.7.2	The voltage ratio	1504
13.5.7.3	The loading of the primary	1505
13.5.7.4	The current ratio	1507
13.5.7.5	Energy losses in the transformer	1508
13.5.7.6	The transformer in three phase distribution	1509
13.5.8	Eddy currents	1511
14	Wave motion II: Electromagnetic waves	1516
14.1	Introduction	1516
14.2	Electromagnetic theory	1517
14.2.1	The electromagnetic field in vacuum	1517
14.2.1.1	What the first equation means	1518
14.2.1.2	What the second equation means	1519
14.2.1.3	What the third equation means	1520
14.2.1.4	What the fourth equation means	1521
14.2.1.5	The four equations: an overview	1522
14.2.2	Electromagnetic fields in material media	1525
14.3	Electromagnetic waves	1526
14.3.1	Sources of electromagnetic waves	1527

CONTENTS

14.3.2	Transmission of energy	1529
14.3.3	The principle of superposition	1529
14.4	The plane progressive monochromatic wave	1531
14.4.1	Space-time field variations	1531
14.4.2	Frequency, wavelength and velocity	1534
14.4.3	The phase	1537
14.4.4	The wave front and its propagation	1538
14.4.5	The electromagnetic spectrum	1540
14.4.6	Energy flux and intensity	1542
14.4.6.1	Energy density and energy flux	1542
14.4.6.2	Intensity	1545
14.4.6.3	Velocity of energy transport	1548
14.4.7	Radiation pressure	1550
14.4.8	The state of polarization of an electromagnetic wave	1553
14.4.9	Wave propagating in an arbitrarily chosen direction	1557
14.4.10	Wave normals and rays	1559
14.5	The complex representation of wave functions	1560
14.6	Reflection and refraction of plane waves	1563
14.6.1	Reflection	1566
14.6.2	Refraction	1567
14.6.3	Total internal reflection	1568
14.7	Dispersion and absorption	1570
14.7.1	Plane waves in a dielectric medium	1570
14.7.1.1	Features of dielectric constant: summary	1576
14.7.2	Plane waves in a conducting medium: attenuation .	1577
14.7.3	Negative refractive index: metamaterials	1581

CONTENTS

14.8	The monochromatic spherical and cylindrical waves	1583
14.9	Wave packet and group velocity	1587
14.10	Coherent and incoherent waves	1588
14.11	Stationary waves	1592
15	Wave Optics	1597
15.1	Introduction	1597
15.2	Experiments with an illuminated aperture	1600
15.2.1	Spreading and bending of waves	1604
15.2.2	Waves coming out of pin-holes and slits	1606
15.3	Interference of coherent waves	1609
15.3.1	Superposition of two plane waves	1609
15.3.1.1	The resultant intensity.	1612
15.3.1.2	Maxima and minima in $I(\mathbf{r})$	1613
15.3.1.3	Conditions for interference	1614
15.3.2	A simplified approach: interference of scalar waves	1615
15.3.3	The complex representation of wave functions . . .	1617
15.3.4	Young's pattern with a pair of pin-holes	1619
15.3.4.1	Phase difference and path difference . . .	1624
15.3.5	Young's pattern with a pair of slits	1626
15.3.6	Young's fringes with partially coherent light	1630
15.3.6.1	Young's pattern with unpolarized light . .	1631
15.3.6.2	Quasi-monochromatic light	1632
15.3.6.3	Coherence time	1632
15.3.6.4	Coherence length	1635

CONTENTS

15.3.7	Thin film patterns	1637
15.3.7.1	Fringes of equal inclination	1643
15.3.7.2	Fringes of equal thickness	1646
15.3.7.3	The colour of thin films	1652
15.3.7.4	Non-reflective coatings	1656
15.4	Diffraction of light	1658
15.4.1	Introduction	1658
15.4.2	The basic approach in diffraction theory	1661
15.4.3	The intensity distribution	1665
15.4.4	Fraunhofer and Fresnel diffraction patterns	1668
15.4.5	The single slit Fraunhofer pattern	1671
15.4.5.1	Ray paths corresponding to secondary waves.	1671
15.4.5.2	The intensity formula.	1673
15.4.5.3	Absence of diffraction in the vertical direc- tion.	1674
15.4.5.4	The intensity graph	1676
15.4.5.5	Fraunhofer fringes with a slit-source.	1679
15.4.5.6	Phase in Fraunhofer diffraction	1681
15.4.5.7	Coherence properties and diffraction fringes	1682
15.4.6	The double slit Fraunhofer pattern	1683
15.4.7	The diffraction grating	1688
15.4.8	Resolving powers of optical instruments	1692
15.5	Polarized and unpolarized light	1695
15.5.1	The basic components: x-polarized and y-polarized light	1696

CONTENTS

15.5.2	Specifying the basic components and their phase relation	1696
15.5.3	Correlations: polarized and unpolarized light	1697
15.5.4	Elliptically polarized light	1698
15.5.5	Circularly polarized and linearly polarized light . . .	1699
15.5.6	Intensity relations	1701
15.5.7	Optical anisotropy: double refraction	1702
15.5.8	Production of polarized light	1703
15.6	Lasers: coherent sources of light	1705
15.6.1	Emission and absorption as quantum processes . .	1706
15.6.2	The state of a photon	1707
15.6.3	Classical and quantum descriptions of the field . .	1708
15.6.4	Stimulated emission of radiation	1710
15.6.5	Stimulated emission and coherent waves	1712
15.6.6	Population inversion	1713
15.6.7	Light amplification in a resonant cavity	1716
15.6.8	The laser as a coherent source of light: summary .	1718
15.7	Holography	1719
15.8	Scattering of light	1726
15.8.1	Rayleigh scattering	1727
15.8.1.1	Rayleigh scattering by a single scatterer .	1728
15.8.1.2	Rayleigh scattering in a fluid	1732
15.8.2	Mie scattering	1735
15.8.3	Raman scattering	1736
15.9	Wave optics and ray optics	1738

CONTENTS

16 Quantum theory	1744
16.1 Introduction	1744
16.1.1 Quantum and classical concepts: analogy from optics	1746
16.1.2 Emergence of quantum concepts	1747
16.2 Quantum and classical descriptions of the state of a system	1749
16.2.1 Illustration: the free particle in one dimension . . .	1751
16.2.2 Wave-like features	1752
16.2.3 Wave function: de Broglie relations	1754
16.2.4 Quantum description of state: summary	1755
16.3 The principle of uncertainty	1756
16.3.1 Uncertainty in momentum	1757
16.3.2 Momentum and position uncertainties	1759
16.4 The simple harmonic oscillator	1760
16.4.1 Bound system: quantization of energy	1761
16.4.2 Digression: the continuous and the discrete	1763
16.4.3 Harmonic oscillator: the uncertainty principle at work	1765
16.5 Superposed states in quantum theory	1768
16.6 Black body radiation: Planck's hypothesis	1770
16.7 Bohr's theory of the hydrogen atom	1776
16.7.1 The hydrogen spectrum	1778
16.7.2 Bohr's postulates and the hydrogen spectrum . . .	1780
16.7.3 Bohr's theory and the quantum theory of the atom	1784
16.7.4 The hydrogen spectrum: mechanism	1787
16.8 Applications of Bohr's theory	1789
16.9 Bound and unbound systems: standing and travelling waves	1791

CONTENTS

16.10	Photoelectric effect: Einstein's theory	1792
16.10.1	Features of photoelectric emission	1793
16.10.2	The role of photons in photoelectric emission	1796
16.10.3	Bound systems and binding energy	1797
16.10.4	The basic equation for photoelectric emission	1800
16.11	The Compton effect	1805
16.12	Quantum theory goes deep: particles and fields	1810
17	Relativity: the special and the general theory	1814
17.1	Relativity: Introduction	1814
17.1.1	Introduction: frames of reference, inertial frames	1814
17.1.2	Introduction: the Galilean principle of equivalence	1816
17.1.3	Introduction: the non-relativistic and the relativistic	1817
17.1.4	Introduction: the equivalence principles	1819
17.2	The special theory of relativity	1821
17.2.1	Inertial frames and the velocity of light	1821
17.2.2	The Lorentz transformation formulae	1822
17.2.3	Space-time interval	1827
17.2.4	Lorentz transformation: the general form	1829
17.2.5	Consequences of the Lorentz transformation formula	1834
17.2.5.1	Relativity of simultaneity	1836
17.2.5.2	Lorentz contraction	1837
17.2.5.3	Time dilatation	1841
17.2.5.4	Velocity transformation	1844
17.2.5.5	Relativistic aberration	1846

CONTENTS

17.2.6	Space-time diagrams and world lines	1849
17.2.6.1	Representation of events and world lines	1849
17.2.6.2	The space-time diagram and Lorentz transformations	1852
17.2.6.3	The invariant regions	1854
17.2.6.4	Time-like and space-like separations	1856
17.2.7	Space-time geometry	1858
17.2.7.1	Geometry in '1+1' dimensions	1858
17.2.7.2	The (1+3)-dimensional space-time geometry	1861
17.2.8	Physical quantities as four-vectors	1864
17.2.8.1	Vectors: the basic idea	1864
17.2.8.2	Four-vectors	1868
17.2.8.3	Four-vectors and tensors: a primer	1870
17.2.8.4	The velocity four-vector	1878
17.2.8.5	Relativistic mass, relativistic momentum, and relativistic energy	1880
17.2.8.6	The energy-momentum four-vector	1883
17.2.8.7	The Döppler effect	1886
17.2.8.8	The force four-vector	1890
17.2.9	The electromagnetic field as a tensor	1894
17.3	The general theory of relativity	1899
17.3.1	Introduction: the general principle of equivalence	1899
17.3.2	Tensor fields	1903
17.3.3	Einstein's equation for the metric tensor	1905
17.3.4	Equation of motion in a gravitational field	1908
17.3.5	Gravitation and the electromagnetic field	1910

CONTENTS

17.3.6	The Schwarzschild solution	1911
17.3.7	Schwarzschild solution: a few consequences	1915
17.3.7.1	The Newtonian limit	1915
17.3.7.2	Gravitational time dilatation and red shift	1917
17.3.7.3	Black holes	1920
17.3.8	The general theory of relativity: the classical and the quantum	1921
18 Atoms, Nuclei, and Molecules		1924
18.1	Introduction	1924
18.2	The atomic nucleus: atomic volume and mass	1926
18.3	Single electron states	1928
18.3.1	Single electron states: elliptic orbits and degeneracy	1930
18.3.2	Single electron states: space quantization	1933
18.3.3	Single electron states: electron spin	1935
18.3.4	Single electron states: summary and notation	1937
18.4	Building up the atom	1939
18.4.1	Electronic configuration and electron shells	1939
18.4.2	Electronic configurations and the periodic table	1942
18.5	The atom as a whole	1944
18.5.1	Screening of the nuclear charge	1944
18.5.2	More on electronic configurations	1947
18.6	Continuous and characteristic X-ray spectra	1948
18.6.1	Bohr's theory and X-ray spectra	1951
18.6.2	Atomic spectra	1955

CONTENTS

18.7	Physics of the atomic nucleus	1957
18.7.1	The atomic number and the mass number	1957
18.7.2	The nucleon: internal characteristics	1958
18.7.3	The interaction force between nucleons	1960
18.7.3.1	The saturation property of nuclear forces .	1963
18.7.3.2	The nucleus as a liquid drop: nuclear radius	1966
18.7.4	Nuclear binding energy and mass: nuclear stability	1968
18.7.4.1	The mass-energy equivalence principle . .	1968
18.7.4.2	Units for nuclear masses	1969
18.7.4.3	Relating nuclear mass to binding energy .	1970
18.7.4.4	Binding energy and nuclear stability . . .	1972
18.7.5	The binding energy curve	1974
18.7.5.1	The starting point	1974
18.7.5.2	Finite size effect: the surface correction . .	1976
18.7.5.3	The effect of the nuclear charge	1977
18.7.5.4	Other corrections: the mass formula . . .	1978
18.7.5.5	The graph	1980
18.7.6	Single particle and collective nuclear excitations . .	1983
18.7.7	Radioactive decay	1987
18.7.7.1	Alpha decay	1989
18.7.7.2	Beta decay	1991
18.7.7.3	Gamma decay	1996
18.7.7.4	Radioactive decay law	1998
18.7.7.5	Successive radioactive disintegrations . .	2000
18.7.8	Nuclear reactions	2001
18.7.8.1	Introduction: examples of nuclear reactions	2001

CONTENTS

18.7.8.2	Conservation principles in nuclear reactions	2003
18.7.8.3	Energy balance in nuclear reactions	2004
18.7.8.4	Nuclear fission	2005
18.7.8.5	Nuclear fusion	2007
18.7.9	Introduction to elementary particles	2010
18.7.9.1	The classification of elementary particles .	2011
18.7.9.2	Elementary particles and quantum num- bers	2013
18.7.9.3	Anti-particles	2016
18.7.9.4	The quark structure of elementary particles	2017
18.7.9.5	The basic interactions	2019
18.7.9.6	The conservation principles	2020
18.7.9.7	The mediating particles	2022
18.7.9.8	Symmetries and the conservation laws . .	2024
18.7.9.9	The Higgs field and the Higgs boson	2025
18.8	The physics of molecules	2026
18.8.1	The binding of atoms in molecules: molecular bonds	2027
18.8.1.1	The ionic bond	2027
18.8.1.2	The covalent bond	2029
18.8.1.3	The hydrogen bond	2033
18.8.2	Stationary states of molecules: molecular excitations	2035
18.9	From molecules to solids	2039
19	Electronics	2042
19.1	Introduction	2042

CONTENTS

19.2	Electrical properties of semiconductors	2044
19.2.1	Energy bands of electrons in a crystal	2045
19.2.2	The filling up of the bands	2048
19.2.3	The valence- and the conduction bands	2049
19.2.4	Electrochemical potential and the Fermi level	2054
19.2.5	Energy bands: summary	2056
19.2.6	Conductors, insulators, and intrinsic semiconduc- tors	2057
19.2.7	Doped semiconductors	2061
19.2.8	Intrinsic and doped semiconductors: summary	2067
19.3	The p-n junction diode	2068
19.3.1	The junction diode: structural features	2068
19.3.2	The junction diode at thermal equilibrium	2070
19.3.3	The junction diode in forward and reverse bias	2075
19.3.4	Junction diode: current-voltage graph	2077
19.3.5	Junction diode: summary	2080
19.3.6	The diode as rectifier	2082
19.3.7	Special-purpose diodes	2085
19.3.7.1	The Zener diode	2085
19.3.7.2	The light emitting diode	2089
19.3.7.3	The laser diode	2091
19.4	The bipolar junction transistor	2092
19.4.1	The emitter, the base, and the collector	2093
19.4.2	The two-diode model of the transistor	2096
19.4.3	Transistor currents and voltages	2096
19.4.4	The transistor in the active mode	2097

CONTENTS

19.4.5	The transistor in the saturation and cut-off modes .	2099
19.4.6	Transistor characteristics	2099
19.4.7	The parameters α and β of the transistor	2104
19.4.8	Convention for using notations	2107
19.4.9	The common emitter input impedance	2108
19.4.10	AC transistor operation: summary	2109
19.4.11	Voltage amplification	2109
	19.4.11.1DC bias: the Q-point	2110
	19.4.11.2Blocking and bypass capacitors	2113
	19.4.11.3AC operation of the amplifier: voltage gain	2114
19.5	Introduction to digital electronics	2117
19.5.1	Boolean algebra	2118
	19.5.1.1 Digital circuits and binary numbers	2119
	19.5.1.2 Combinational and sequential circuits . .	2120
19.5.2	The basic logic gates	2121
	19.5.2.1 The OR and AND gates with diodes	2124
	19.5.2.2 The NOT gate with a transistor	2126
19.5.3	Logic families	2128
19.5.4	The Exclusive-OR, NOR, and NAND gates	2129
19.5.5	Boolean identities and Boolean expressions	2130
	19.5.5.1 De Morgan's identities	2130
19.5.6	The binary numbers. Binary arithmetic	2132
	19.5.6.1 The Decimal, Binary, Octal, and Hex sys-	
	tems	2132
	19.5.6.2 Bits and Bytes	2134

CONTENTS

19.5.7	Eight-bit arithmetic	2134
19.5.7.1	1's complement and 2's complement . . .	2134
19.5.7.2	Addition and subtraction in 8-bit arithmetic	2136
19.5.7.3	Overflow and carry	2138
19.5.7.4	Binary multiplication and division	2139
19.5.8	The adder	2140
