## List of chapters

1. Introduction
2. Vectors
3. Mechanics
4. Simple Harmonic Motion
5. Gravitation
6. Elasticity
7. Mechanics of fluids
8. Thermal Physics
9. Wave motion I: Acoustic waves
10. Ray Optics
11. Electrostatics
12. Electricity I: Steady currents and their magnetic effects
13. Electricity II: Varying and alternating currents
14. Wave motion II: Electromagnetic waves
15. Wave Optics
16. Quantum theory
17. Relativity: the special and the general theory
18. Atoms, Nuclei, and Molecules
19. Electronics

# Contents

<b>1</b>	<b>Introduction: Units and Dimensions</b>	<b>1</b>
1.1	Physical quantities and their units . . . . .	1
1.2	Systems of units: the SI system . . . . .	2
1.2.1	Relations among physical quantities, and their units . . . . .	2
1.2.2	The dimension of a physical quantity . . . . .	3
1.3	Basic and derived units . . . . .	4
1.4	SI units, and dimensions . . . . .	6
1.4.1	The seven base units . . . . .	6
1.4.2	Dimensions related to units . . . . .	8
1.4.3	Derived units: selected physical quantities . . . . .	10
1.4.4	Units and dimensions of a few physical constants . . . . .	15
1.4.5	Prefixes denoting multiples and submultiples . . . . .	18
1.5	Other systems of units . . . . .	18
1.5.1	Systems of units other than the SI system . . . . .	18
1.5.2	Conversion from the SI to other systems of units . . . . .	19
1.5.3	A few convenient non-SI units . . . . .	19
1.6	Dimensional analysis . . . . .	21
1.6.1	Principle of dimensional homogeneity . . . . .	21
1.6.2	An application: Stokes' formula for viscous drag force . . . . .	22
1.6.3	The principle of similarity . . . . .	24
1.7	Physical quantities as scalars and vectors . . . . .	27
<b>2</b>	<b>Vectors</b>	<b>31</b>
2.1	Introduction . . . . .	31
2.1.1	Equality of two vectors . . . . .	33

---

CONTENTS

---

2.1.2	Magnitude of a vector . . . . .	34
2.1.3	The null vector . . . . .	35
2.2	Operations with vectors . . . . .	35
2.2.1	Addition of vectors . . . . .	35
2.2.1.1	Addition of two vectors . . . . .	35
2.2.1.2	Addition of more than two vectors . . . . .	36
2.2.2	Multiplication of a vector with a scalar . . . . .	37
2.2.3	Features of vector addition and scalar multiplication . . . . .	38
2.3	Unit vector . . . . .	40
2.4	Scalar product of two vectors . . . . .	42
2.4.1	Features of scalar product . . . . .	43
2.4.2	Orthonormal triads of vectors . . . . .	44
2.5	Cartesian components of a vector . . . . .	45
2.5.1	Two dimensional vectors . . . . .	47
2.5.2	Vector operations in terms of Cartesian components . . . . .	48
2.5.3	Scalar product of two vectors in terms of Cartesian components . . . . .	49
2.5.4	Direction cosines relating to a unit vector . . . . .	50
2.6	The vector product of two vectors . . . . .	52
2.6.1	Features of the vector product . . . . .	53
2.6.2	Vector expression for a planar area . . . . .	55
2.7	Scalar and vector components of a vector . . . . .	56
2.8	The right hand rule . . . . .	59
2.9	Transformation of vectors . . . . .	60
2.10	Scalar and vector triple products . . . . .	64
2.10.1	Scalar triple product . . . . .	64
2.10.2	Vector triple product . . . . .	66
2.11	Vector function of a scalar variable . . . . .	67
2.11.1	The derivative of a vector function . . . . .	68
2.12	Scalar function of a vector variable . . . . .	70
2.12.1	The position vector . . . . .	70
2.12.2	Scalar function of the position vector: scalar field . . . . .	72

---

CONTENTS

---

2.13	Vector function of a vector variable: vector field . . . . .	73
2.14	Derivatives and integrals of scalar and vector fields . . . . .	74
2.14.1	Derivatives of scalar and vector fields . . . . .	74
2.14.2	Volume-, surface-, and line integrals . . . . .	76
<b>3</b>	<b>Mechanics</b>	<b>81</b>
3.1	Introduction: frames of reference . . . . .	81
3.2	Motion of a single particle . . . . .	84
3.2.1	Introduction . . . . .	84
3.2.2	Kinematic quantities . . . . .	86
3.2.2.1	The position vector and its time dependence . . . . .	87
3.2.2.2	Displacement . . . . .	88
3.2.2.3	Velocity . . . . .	89
3.2.2.4	Speed . . . . .	90
3.2.2.5	Planar and rectilinear motions . . . . .	91
3.2.2.6	Momentum . . . . .	93
3.2.2.7	Kinetic energy . . . . .	94
3.2.2.8	Acceleration . . . . .	95
3.3	Newton's laws of motion: Introduction . . . . .	96
3.4	Inertial frames. Newton's first law. . . . .	97
3.5	Newton's second law: Equation of motion . . . . .	98
3.5.1	The concept of force . . . . .	98
3.5.2	The second law . . . . .	99
3.5.3	Equation of motion . . . . .	100
3.5.4	The line of action of a force . . . . .	102
3.5.5	The resultant of a number of forces . . . . .	104
3.5.6	Forces in equilibrium . . . . .	105
3.6	Motion along a straight line . . . . .	106
3.7	Motion in a plane . . . . .	111
3.8	Field of force . . . . .	116
3.9	Transformations from one frame of reference to another . . . . .	117
3.9.1	Transformation of velocity . . . . .	117

---

CONTENTS

---

3.9.2	Relative velocity . . . . .	119
3.9.3	Transformations of displacement and time . . . . .	121
3.9.4	Transformation of acceleration . . . . .	123
3.10	Equations of motion in different frames of reference . . . . .	124
3.10.1	Characterization of the inertial frames . . . . .	124
3.10.2	Equations of motion of a particle in inertial frames . . . . .	124
3.10.3	Equation of motion in a non-inertial frame . . . . .	126
3.11	Force and work . . . . .	130
3.12	Work in rectilinear motion. Potential energy. . . . .	134
3.13	Kinetic energy . . . . .	137
3.14	Principle of conservation of energy in rectilinear motion . . . . .	139
3.15	Kinetic energy, potential energy, and work . . . . .	140
3.15.1	Kinetic energy and work . . . . .	140
3.15.2	Potential energy. Conservative force-fields. . . . .	141
3.15.3	Principle of conservation of energy: the general context . . . . .	144
3.15.4	Work and energy: summary . . . . .	145
3.15.5	Energy as ability to perform work . . . . .	148
3.15.6	Conservation of energy: a broader view . . . . .	150
3.16	Mechanics of a single particle: overview . . . . .	154
3.17	Mechanics of a system of particles . . . . .	156
3.17.1	Internal and external forces. Equations of motion. . . . .	156
3.17.2	Newton's third law . . . . .	157
3.17.3	Center of mass of a system of particles . . . . .	159
3.17.3.1	The position and velocity of the center of mass . . . . .	159
3.17.3.2	center of mass momentum . . . . .	162
3.17.3.3	Determination of the center of mass . . . . .	163
3.17.4	System of particles: center of mass motion . . . . .	165
3.17.5	Principle of conservation of momentum . . . . .	167
3.17.6	System of particles: principle of conservation of energy . . . . .	168
3.17.7	Elastic and inelastic collisions . . . . .	170
3.17.7.1	Introduction . . . . .	170

---

CONTENTS

---

3.17.7.2	Elastic and inelastic processes . . . . .	171
3.17.7.3	The energy balance equation . . . . .	172
3.17.7.4	Momentum balance . . . . .	174
3.17.7.5	Relative velocities: normal and tangential . . . . .	174
3.17.7.6	The center of mass frame . . . . .	176
3.17.7.7	Describing the collision process . . . . .	176
3.17.7.8	'Head-on' collision . . . . .	177
3.17.7.9	Head-on collision in the 'laboratory frame' . . . . .	179
3.17.7.10	Elastic collisions in planar motion . . . . .	181
3.17.7.11	Direction of energy transfer in elastic collisions . . . . .	185
3.17.8	Impulse. Impulsive forces. . . . .	188
3.17.8.1	Impulse of a force or of a system of forces . . . . .	188
3.17.8.2	Impulsive forces . . . . .	191
3.18	Newton's laws and action-at-a-distance . . . . .	194
3.19	Angular motion . . . . .	196
3.19.1	Angular velocity of a particle about a point . . . . .	196
3.19.2	Angular velocity about an axis . . . . .	199
3.19.3	Circular motion . . . . .	201
3.19.4	Centripetal acceleration . . . . .	204
3.19.4.1	Uniform circular motion . . . . .	204
3.19.4.2	Motion along a space curve . . . . .	209
3.19.5	Radial and cross-radial accelerations in planar motion . . . . .	211
3.19.6	Angular momentum . . . . .	214
3.19.6.1	Angular momentum about a point . . . . .	214
3.19.6.2	Angular momentum about an axis . . . . .	215
3.19.6.3	Angular momentum in circular motion . . . . .	216
3.19.7	Moment of a force . . . . .	217
3.19.7.1	Moment of a force about a point . . . . .	217
3.19.7.2	Moment of a force about an axis . . . . .	220
3.19.7.3	Impulse of a torque . . . . .	221
3.19.8	Angular motion of a system of particles . . . . .	222

---

CONTENTS

---

3.19.9	Principle of conservation of angular momentum . . . . .	223
3.19.10	Rotational motion about an axis: moment of inertia . . . . .	225
3.19.11	Work done in rotational motion . . . . .	231
3.19.12	Potential energy in rotational motion . . . . .	233
3.19.13	Calculation of moments of inertia . . . . .	234
3.19.13.1	The theorem of perpendicular axes . . . . .	234
3.19.13.2	The theorem of parallel axes . . . . .	236
3.19.13.3	Radius of gyration . . . . .	237
3.19.13.4	Additivity of moments of inertia . . . . .	238
3.19.13.5	Moments of inertia: examples . . . . .	238
3.20	Motion of rigid bodies . . . . .	248
3.20.1	Translational and rotational motion of rigid bodies . . . . .	248
3.20.2	Rolling motion . . . . .	251
3.20.3	Precession . . . . .	257
3.20.3.1	Precession under an applied torque . . . . .	257
3.20.3.2	Precession of a heavy top . . . . .	259
3.20.3.3	Precession of the earth's axis of rotation . . . . .	260
3.20.3.4	Free precession . . . . .	262
3.21	Rotating frames of reference . . . . .	263
3.22	Reduction of a system of forces . . . . .	268
3.22.1	Introduction . . . . .	268
3.22.1.1	Concurrent forces . . . . .	268
3.22.1.2	Non-concurrent forces . . . . .	269
3.22.2	Concurrent systems in equilibrium . . . . .	270
3.22.2.1	Two concurrent forces in equilibrium . . . . .	270
3.22.2.2	Three concurrent forces in equilibrium . . . . .	270
3.22.2.3	More than three concurrent forces . . . . .	272
3.22.2.4	Moment of concurrent forces in equilibrium . . . . .	274
3.22.3	Reduction of a system of forces acting on a rigid body . . . . .	275
3.22.3.1	Reduction of a pair of like parallel forces . . . . .	275
3.22.3.2	Unlike and unequal parallel forces . . . . .	277

---

CONTENTS

---

3.22.3.3	Equal and unlike parallel forces : couple . . . . .	277
3.22.3.4	Composition of couples . . . . .	282
3.22.3.5	A couple and a force in a parallel plane . . . . .	283
3.22.3.6	Reduction of a system of co-planar forces . . . . .	284
3.22.3.7	Reduction of non-coplanar forces: wrench . . . . .	285
3.23	Static and dynamic friction . . . . .	287
3.23.1	Introduction . . . . .	287
3.23.2	Static friction . . . . .	289
3.23.3	Dynamic friction . . . . .	290
3.23.4	The mechanism underlying friction . . . . .	296
3.23.5	Wet friction and lubrication . . . . .	304
3.23.6	Rolling friction . . . . .	305
3.24	Motion of a wheel under driving . . . . .	309
3.24.1	Driving by means of a couple . . . . .	310
3.24.2	Driving by means of a force . . . . .	313
<b>4</b>	<b>Simple Harmonic Motion</b>	<b>318</b>
4.1	Oscillatory motion . . . . .	318
4.1.1	Simple harmonic motion . . . . .	319
4.1.1.1	The equation of motion . . . . .	319
4.1.1.2	Solving the equation of motion . . . . .	321
4.1.1.3	General and particular solutions . . . . .	322
4.1.1.4	Relating the solution to initial conditions . . . . .	323
4.1.1.5	Periodicity of motion . . . . .	324
4.1.1.6	The phase . . . . .	325
4.1.1.7	The amplitude . . . . .	326
4.1.1.8	Graphical representation of the motion . . . . .	328
4.2	Energy in simple harmonic motion . . . . .	329
4.2.1	Potential energy . . . . .	329
4.2.2	Kinetic energy in simple harmonic motion . . . . .	331
4.3	Simple harmonic oscillations of physical quantities . . . . .	333
4.3.1	Angular oscillations . . . . .	335

---

CONTENTS

---

4.4	The pendulum and the spring . . . . .	341
4.4.1	The simple pendulum . . . . .	341
4.4.2	The spring . . . . .	344
4.5	Damped simple harmonic motion . . . . .	348
4.5.1	Damped SHM: equation of motion . . . . .	348
4.5.2	Underdamped and overdamped motions . . . . .	351
4.5.2.1	Underdamped SHM . . . . .	351
4.5.2.2	Overdamped SHM . . . . .	353
4.5.3	Damped SHM: dissipation of energy . . . . .	355
4.6	Forced SHM . . . . .	357
4.6.1	Energy exchange in forced SHM. Resonance. . . . .	361
<b>5</b>	<b>Gravitation</b>	<b>367</b>
5.1	Introduction: Newton's law of gravitation . . . . .	367
5.1.1	Principle of superposition . . . . .	369
5.2	Gravitational intensity and potential . . . . .	372
5.2.1	Gravitational intensity . . . . .	372
5.2.2	Gravitational potential . . . . .	375
5.2.3	Gravitational potential: summary . . . . .	377
5.2.4	'Potential at infinity'. . . . .	377
5.2.5	Potential due to a point mass . . . . .	378
5.2.6	Potential due to a number of point masses . . . . .	380
5.2.7	Describing a gravitational field . . . . .	382
5.3	Gauss' principle in gravitation . . . . .	383
5.3.1	Flux of gravitational intensity . . . . .	383
5.3.2	Gauss' principle . . . . .	385
5.3.3	Application: a spherically symmetric body . . . . .	386
5.3.3.1	Intensity and potential at an external point . . . . .	387
5.3.3.2	A spherical shell . . . . .	388
5.3.3.3	Gravitational interaction of two spherical bodies . . . . .	392
5.4	Earth's gravitational field: acceleration due to gravity . . . . .	394
5.4.1	Earth's gravitational field . . . . .	394

---

CONTENTS

---

5.4.2	Center of gravity . . . . .	398
5.4.3	The weight of a body . . . . .	400
5.4.3.1	Weight as a force of reaction: weightlessness . . . . .	400
5.4.3.2	Weight reduction due to earth's rotation . . . . .	403
5.4.4	Escape velocity . . . . .	404
5.5	The motion of planetary bodies . . . . .	406
5.5.1	Introduction . . . . .	406
5.5.2	The equation of motion and the nature of trajectories . . . . .	407
5.5.3	Kepler's laws . . . . .	409
5.5.4	Circular orbits in an inverse square field . . . . .	412
5.5.5	Tidal force . . . . .	414
5.5.6	The orbit of the moon . . . . .	417
5.5.7	The motion of a projectile . . . . .	419
5.6	Gravitation: a broader view . . . . .	420
<b>6</b>	<b>Elasticity</b>	<b>424</b>
6.1	Introduction: External and internal forces in a body . . . . .	424
6.2	Strain and stress . . . . .	425
6.3	Quantitative definition of strain: strain parameters . . . . .	427
6.3.1	Tensile strain . . . . .	430
6.3.2	Bulk strain . . . . .	431
6.3.3	Shear strain . . . . .	432
6.3.4	Mixed strain . . . . .	435
6.3.5	Principal axes. Principal components of strain. . . . .	435
6.4	Stress in a deformable body . . . . .	436
6.4.1	Tensile stress . . . . .	439
6.4.2	Shear stress . . . . .	440
6.4.3	Bulk stress . . . . .	441
6.4.4	Mixed stress: principal components of stress . . . . .	442
6.5	Stress-strain curve . . . . .	443
6.5.1	A weightless wire with a load . . . . .	443
6.5.2	The curve: principal features . . . . .	444

---

CONTENTS

---

6.5.3	Elastic and plastic deformations . . . . .	448
6.6	Stress-strain relations: elastic constants . . . . .	452
6.6.1	Young's modulus . . . . .	453
6.6.2	Poisson's ratio . . . . .	455
6.6.3	Modulus of rigidity . . . . .	459
6.6.4	Bulk modulus . . . . .	461
6.6.5	Principle of superposition . . . . .	461
6.6.6	Relations between the elastic constants . . . . .	463
6.6.7	Elastic properties of fluids . . . . .	464
6.7	Strain energy . . . . .	467
<b>7</b>	<b>Mechanics of Fluids</b>	<b>472</b>
7.1	Introduction: the three states of matter . . . . .	472
7.2	Fluids in equilibrium . . . . .	474
7.2.1	Internal forces in a fluid: pressure . . . . .	474
7.2.2	Pressure in an incompressible liquid . . . . .	477
7.2.3	Thrust of a fluid . . . . .	480
7.2.4	Atmospheric pressure . . . . .	484
7.2.5	Buoyancy: Archimedes' Principle . . . . .	486
7.2.6	Equilibrium of fully or partly submerged body . . . . .	487
	7.2.6.1 Condition of equilibrium . . . . .	487
	7.2.6.2 Stability of equilibrium . . . . .	490
7.2.7	Pascal's law: transmission of pressure . . . . .	499
7.3	Fluids in motion: a few introductory concepts . . . . .	503
7.3.1	Stream lines: steady flow . . . . .	504
7.3.2	From laminar flow to turbulence . . . . .	507
7.3.3	Rotational and irrotational flows . . . . .	507
7.3.4	Equation of continuity . . . . .	508
7.3.5	Ideal fluid: equation of motion . . . . .	509
7.3.6	Energy conservation: Bernoulli's principle . . . . .	511
7.3.7	Potential flow . . . . .	514
7.3.8	Lift and drag forces: a brief introduction . . . . .	515

---

CONTENTS

---

7.4	The siphon . . . . .	516
7.5	Viscosity and fluid flow . . . . .	523
7.5.1	Introduction . . . . .	523
7.5.2	Newton's formula for viscous force . . . . .	523
7.5.2.1	Kinematic viscosity . . . . .	526
7.5.2.2	Variation of viscosity with temperature . . . . .	526
7.5.3	Viscosity and transport of momentum . . . . .	527
7.5.4	Viscosity and turbulence . . . . .	529
7.5.5	Non-Newtonian fluids . . . . .	530
7.5.6	Poiseuille's flow . . . . .	532
7.5.7	The origin of the viscous force: a brief outline . . . . .	536
7.5.8	The boundary layer . . . . .	538
7.5.8.1	Laminar boundary layer in Poiseuille's flow . . . . .	539
7.5.8.2	Boundary layer on a flat plate . . . . .	540
7.5.8.3	Boundary layer near a curved obstacle: boundary layer separation . . . . .	543
7.5.9	Stability of fluid flow: vorticity and turbulence . . . . .	551
7.6	Surface energy and surface tension . . . . .	557
7.6.1	Introduction . . . . .	557
7.6.2	Surface energy and surface tension: thermodynamic consid- erations . . . . .	558
7.6.3	The tendency of a liquid surface to shrink . . . . .	562
7.6.4	Surface tension as lateral force . . . . .	563
7.6.5	Angle of contact . . . . .	564
7.6.6	Pressure difference across a curved liquid surface . . . . .	568
7.6.7	Capillary rise . . . . .	571
7.6.8	A few phenomena associated with surface tension . . . . .	578
7.6.8.1	Seepage of water through soil . . . . .	578
7.6.8.2	Formation of raindrops and clouds. . . . .	578
7.6.8.3	Pouring oil over rough sea . . . . .	581
7.6.8.4	Walking on water . . . . .	582

---

CONTENTS

---

7.6.8.5	Rayleigh-Plateau Instability: beads on cobweb threads	583
7.6.8.6	Velocity of surface waves. . . . .	585
7.6.8.7	Surfactants . . . . .	587
<b>8</b>	<b>Thermal Physics</b>	<b>590</b>
8.1	Thermodynamic systems and their interactions . . . . .	590
8.1.1	Adiabatic enclosures: Work . . . . .	591
8.1.2	Diathermic enclosures: Heat . . . . .	592
8.1.3	Examples of adiabatic and diathermic enclosures . . . . .	592
8.2	Thermodynamic equilibrium . . . . .	593
8.3	Thermodynamic processes . . . . .	594
8.3.1	Adiabatic process . . . . .	595
8.3.2	States and processes: thermodynamic state diagram . . . . .	595
8.3.3	Quasi-static processes . . . . .	596
8.3.4	Thermal equilibrium . . . . .	597
8.4	The zeroth law of thermodynamics: Temperature. . . . .	597
8.4.1	Explaining the zeroth law . . . . .	597
8.4.2	Temperature as a thermodynamic variable . . . . .	598
8.4.3	Empirical scales of temperature . . . . .	599
8.4.4	The SI scale of temperature . . . . .	602
8.4.5	The direction of heat flow . . . . .	602
8.4.6	Thermal reservoir: heat source and heat sink . . . . .	603
8.4.7	Isothermal processes . . . . .	604
8.5	Adiabatic processes between given states . . . . .	605
8.6	The significance of adiabatic work . . . . .	607
8.7	The quantitative definition of heat . . . . .	610
8.8	The first law of thermodynamics . . . . .	611
8.8.1	Equivalence of heat and work . . . . .	613
8.8.2	Work performed by a gas in a quasi-static process . . . . .	613
8.8.3	Summary of the first law. . . . .	618
8.9	Intensive and extensive variables . . . . .	622

<b>11 Electrostatics</b>	<b>984</b>
11.1 Introduction: elementary charges . . . . .	984
11.2 Acquisition of charges by bodies . . . . .	986
11.2.1 Transfer of elementary charges . . . . .	986
11.2.2 Contact electrification and contact potential . . . . .	988
11.3 Electrostatic force between charges . . . . .	990
11.3.1 Coulomb's law . . . . .	990
11.3.2 The principle of superposition . . . . .	993
11.4 Electric field intensity and potential . . . . .	995
11.4.1 Electric field intensity . . . . .	995
11.4.2 Electrical potential . . . . .	998
11.4.3 Electrical potential: summary . . . . .	1000
11.4.4 Potential 'at infinity' . . . . .	1000
11.4.5 Potential due to a point charge . . . . .	1003
11.4.6 Potential due to a number of point charges . . . . .	1005
11.4.7 Deriving the intensity from the potential . . . . .	1007
11.5 Force on a thin layer of charge . . . . .	1010
11.6 Electric dipole and dipole moment . . . . .	1012
11.6.1 A pair of equal and opposite point charges . . . . .	1012
11.6.2 Dipole moment and dipole . . . . .	1014
11.6.3 Torque and force on a dipole in an electric field . . . . .	1020
11.6.3.1 Torque on a dipole . . . . .	1020
11.6.3.2 Force on a dipole . . . . .	1022
11.6.4 Potential energy of a dipole in an electric field . . . . .	1023
11.7 Electric lines of force and equipotential surfaces . . . . .	1026
11.7.1 Geometrical description of an electric field. Neutral points. . .	1026
11.7.2 Characteristics of lines of force . . . . .	1029
11.7.3 Equipotential surfaces . . . . .	1031
11.7.4 Density of lines of force. Tubes of force. . . . .	1033
11.7.5 Separations between equipotential surfaces . . . . .	1035

12.8.12	The magnetic dipole . . . . .	1208
12.8.12.1	Electric and magnetic dipole moments . . . . .	1210
12.8.12.2	Current loop: a surface distribution of dipoles . . .	1212
12.8.12.3	Torque and force on a magnetic dipole . . . . .	1215
12.8.12.4	Energy of a magnetic dipole in a magnetic field . .	1216
12.8.13	Magnetic field: comparison with electrostatics . . . . .	1217
12.8.14	Currents and magnetic fields: overview . . . . .	1219
12.9	Magnetic properties of materials . . . . .	1222
12.9.1	Magnetization in a material body . . . . .	1223
12.9.2	Magnetic susceptibility and magnetic permeability . . . . .	1224
12.9.2.1	Field variables as space- and time averages . . . .	1227
12.9.3	Dia- and paramagnetism . . . . .	1228
12.9.3.1	Paramagnetism . . . . .	1228
12.9.3.2	Diamagnetism . . . . .	1233
12.9.4	Ferromagnetism . . . . .	1237
12.9.4.1	Spontaneous magnetization . . . . .	1238
12.9.4.2	Magnetic domains . . . . .	1239
12.9.4.3	The magnetization curve: hysteresis . . . . .	1241
12.9.4.4	Residual magnetism: permanent magnets . . . . .	1242
12.9.4.5	Transition to paramagnetic behaviour . . . . .	1245
12.10	The earth as a magnet: geomagnetism . . . . .	1246
12.11	The chemical effect of current . . . . .	1250
12.11.1	Electrolytes and electrolysis . . . . .	1250
12.11.2	Faraday's laws of electrolysis . . . . .	1251
12.12	Thermoelectric effects . . . . .	1252
<b>13</b>	<b>Electricity II: Varying and alternating currents</b>	<b>1255</b>
13.1	Introduction . . . . .	1255
13.2	Electromagnetic induction . . . . .	1257
13.2.1	Magnetic flux . . . . .	1259
13.2.2	Faraday's law of electromagnetic induction . . . . .	1261
13.2.2.1	Lenz's law . . . . .	1263

---

CONTENTS

---

13.2.2.2	Motional EMF . . . . .	1264
13.2.3	The principle of DC and AC generators . . . . .	1268
13.2.3.1	Conducting frame rotating in a magnetic field . . . . .	1269
13.2.4	Rotating magnetic field: AC motors . . . . .	1274
13.2.4.1	The synchronous motor . . . . .	1276
13.2.4.2	The asynchronous motor . . . . .	1277
13.2.5	The principle of DC motors. Back EMF. . . . .	1278
13.2.5.1	DC motor: back EMF . . . . .	1281
13.2.6	Self-inductance . . . . .	1284
13.2.6.1	Self-inductance of a long solenoid . . . . .	1285
13.2.6.2	Self-inductance of a toroidal solenoid . . . . .	1286
13.2.6.3	Inductor . . . . .	1287
13.2.6.4	Back EMF in an inductor . . . . .	1288
13.2.7	Mutual inductance . . . . .	1288
13.3	Varying currents in electrical circuits . . . . .	1290
13.3.1	Currents and voltages in an $L$ - $R$ circuit . . . . .	1292
13.3.1.1	Growth of current . . . . .	1292
13.3.1.2	Decay of current . . . . .	1295
13.3.2	Analysis of circuits with varying currents . . . . .	1296
13.3.3	Currents and voltages in a $C$ - $R$ circuit . . . . .	1299
13.3.3.1	Growth of charge . . . . .	1299
13.3.3.2	Decay of charge . . . . .	1301
13.3.4	Oscillations in an $L$ - $C$ - $R$ circuit . . . . .	1302
13.4	Magnetic field energy . . . . .	1304
13.5	Alternating currents . . . . .	1308
13.5.1	Mathematical description of AC currents and voltages . . . . .	1308
13.5.1.1	Amplitude, frequency, and phase . . . . .	1309
13.5.1.2	Root mean squared values . . . . .	1309
13.5.1.3	The complex representation of AC quantities . . . . .	1310
13.5.2	An $L$ - $C$ - $R$ circuit with an AC source . . . . .	1313
13.5.3	Impedance . . . . .	1318

## CONTENTS

---

13.5.4	Analysis of AC circuits . . . . .	1321
13.5.5	Power in an AC circuit . . . . .	1326
13.5.6	The three-phase supply . . . . .	1329
13.5.7	The transformer . . . . .	1335
13.5.7.1	Back EMFs . . . . .	1336
13.5.7.2	The loading of the primary . . . . .	1338
13.5.7.3	The current ratio . . . . .	1339
13.5.7.4	Energy losses in the transformer . . . . .	1340
13.5.7.5	The transformer in three phase distribution . . . . .	1341
13.5.8	Eddy currents . . . . .	1342
<b>14</b>	<b>Wave motion II: Electromagnetic waves</b>	<b>1347</b>
14.1	Introduction . . . . .	1347
14.2	Electromagnetic theory . . . . .	1348
14.2.1	The electromagnetic field in free space . . . . .	1348
14.2.1.1	What the first equation means . . . . .	1348
14.2.1.2	What the second equation means . . . . .	1350
14.2.1.3	What the third equation means . . . . .	1350
14.2.1.4	What the fourth equation means . . . . .	1351
14.2.1.5	The four equations: an overview . . . . .	1353
14.2.2	Electromagnetic fields in material media . . . . .	1354
14.3	Electromagnetic waves . . . . .	1355
14.3.1	Sources of electromagnetic waves . . . . .	1356
14.3.2	Transmission of energy . . . . .	1357
14.3.3	The principle of superposition . . . . .	1357
14.4	The plane progressive monochromatic wave . . . . .	1359
14.4.1	Space-time field variations . . . . .	1359
14.4.2	Frequency, wavelength and velocity . . . . .	1362
14.4.3	The phase . . . . .	1364
14.4.4	The wave front and its propagation . . . . .	1366
14.4.5	The electromagnetic spectrum . . . . .	1367

14.4.6	Energy flux and intensity . . . . .	1368
14.4.6.1	Energy density and energy flux . . . . .	1368
14.4.6.2	Intensity . . . . .	1371
14.4.6.3	Velocity of energy transport . . . . .	1373
14.4.7	Radiation pressure . . . . .	1376
14.4.8	The state of polarization of an electromagnetic wave . . . . .	1378
14.4.9	Wave propagating in an arbitrarily chosen direction . . . . .	1381
14.4.10	Wave normals and rays . . . . .	1383
14.5	The complex representation of wave functions . . . . .	1384
14.6	Reflection and refraction of plane waves . . . . .	1386
14.6.1	Reflection . . . . .	1389
14.6.2	Refraction . . . . .	1390
14.6.3	Total internal reflection . . . . .	1391
14.7	Dispersion and absorption . . . . .	1392
14.7.1	Plane waves in a dielectric medium . . . . .	1392
14.7.1.1	Features of dielectric constant: summary . . . . .	1396
14.7.2	Plane waves in a conducting medium: attenuation . . . . .	1397
14.7.3	Negative refractive index: metamaterials . . . . .	1400
14.8	The monochromatic spherical and cylindrical waves . . . . .	1401
14.9	Wave packet and group velocity . . . . .	1404
14.10	Coherent and incoherent waves . . . . .	1405
14.11	Stationary waves . . . . .	1408
<b>15</b>	<b>Wave Optics</b>	<b>1412</b>
15.1	Introduction . . . . .	1412
15.2	Experiments with an illuminated aperture . . . . .	1414
15.2.1	Spreading and bending of waves . . . . .	1417
15.2.2	Waves coming out of pin-holes and slits . . . . .	1419
15.3	Interference of coherent waves . . . . .	1421
15.3.1	Superposition of two plane waves . . . . .	1421
15.3.1.1	The resultant intensity. . . . .	1424
15.3.1.2	Maxima and minima in $I(\mathbf{r})$ . . . . .	1424

## CONTENTS

---

15.3.1.3	Conditions for interference . . . . .	1426
15.3.2	A simplified approach: interference of scalar waves . . . . .	1427
15.3.3	The complex representation of wave functions . . . . .	1428
15.3.4	Young's pattern with a pair of pin-holes . . . . .	1430
15.3.4.1	Phase difference and path difference . . . . .	1433
15.3.5	Young's pattern with a pair of slits . . . . .	1436
15.3.6	Young's fringes with partially coherent light . . . . .	1439
15.3.6.1	Young's pattern with unpolarized light . . . . .	1439
15.3.6.2	Quasi-monochromatic light . . . . .	1440
15.3.6.3	Coherence time . . . . .	1441
15.3.6.4	Coherence length . . . . .	1442
15.3.7	Thin film patterns . . . . .	1443
15.3.7.1	Fringes of equal inclination . . . . .	1449
15.3.7.2	Fringes of equal thickness . . . . .	1451
15.3.7.3	The color of thin films . . . . .	1456
15.3.7.4	Non-reflective coatings . . . . .	1460
15.4	Diffraction of light . . . . .	1461
15.4.1	Introduction . . . . .	1461
15.4.2	The basic approach in diffraction theory . . . . .	1463
15.4.3	The intensity distribution . . . . .	1466
15.4.4	Fraunhofer and Fresnel diffraction patterns . . . . .	1469
15.4.5	The single slit Fraunhofer pattern . . . . .	1471
15.4.5.1	Ray paths corresponding to secondary waves. . . . .	1471
15.4.5.2	The intensity formula. . . . .	1473
15.4.5.3	Absence of diffraction in the vertical direction. . . . .	1474
15.4.5.4	The intensity graph . . . . .	1475
15.4.5.5	Fraunhofer fringes with a slit-source. . . . .	1478
15.4.5.6	Phase in Fraunhofer diffraction . . . . .	1479
15.4.5.7	Coherence properties and diffraction fringes . . . . .	1480
15.4.6	The double slit Fraunhofer pattern . . . . .	1481
15.4.7	The diffraction grating . . . . .	1486

## CONTENTS

15.4.8	Resolving powers of optical instruments . . . . .	1489
15.5	Polarized and unpolarized light . . . . .	1492
15.5.1	The basic components: x-polarized and y-polarized light . . . . .	1492
15.5.2	Specifying the basic components and their phase relation . . . . .	1493
15.5.3	Correlations: polarized and unpolarized light . . . . .	1494
15.5.4	Elliptically polarized light . . . . .	1494
15.5.5	Circularly polarized and linearly polarized light . . . . .	1495
15.5.6	Intensity relations . . . . .	1497
15.5.7	Optical anisotropy: double refraction . . . . .	1498
15.5.8	Production of polarized light . . . . .	1499
15.6	Lasers: coherent sources of light . . . . .	1500
15.6.1	Emission and absorption as quantum processes . . . . .	1501
15.6.2	The state of a photon . . . . .	1502
15.6.3	Classical and quantum descriptions of the field . . . . .	1503
15.6.4	Stimulated emission of radiation . . . . .	1504
15.6.5	Stimulated emission and coherent waves . . . . .	1505
15.6.6	Population inversion . . . . .	1507
15.6.7	Light amplification in a resonant cavity . . . . .	1509
15.6.8	The laser as a coherent source of light: summary . . . . .	1510
15.7	Holography . . . . .	1511
15.8	Scattering of light . . . . .	1517
15.8.1	Rayleigh scattering . . . . .	1517
15.8.1.1	Rayleigh scattering by a single scatterer . . . . .	1518
15.8.1.2	Rayleigh scattering in a fluid . . . . .	1522
15.8.2	Mie scattering . . . . .	1524
15.8.3	Raman scattering . . . . .	1525
15.9	Wave optics and ray optics . . . . .	1526
<b>16</b>	<b>Quantum theory</b>	<b>1531</b>
16.1	Introduction . . . . .	1531
16.1.1	Quantum and classical concepts: analogy from optics . . . . .	1532
16.1.2	Emergence of quantum concepts . . . . .	1533

16.2	Quantum and classical descriptions of the state of a system . . . . .	1534
16.2.1	Illustration: the free particle in one dimension . . . . .	1536
16.2.2	Wave-like features . . . . .	1538
16.2.3	Wave function: de Broglie relations . . . . .	1539
16.2.4	Quantum description of state: summary . . . . .	1539
16.3	The principle of uncertainty . . . . .	1541
16.3.1	Uncertainty in momentum . . . . .	1541
16.3.2	Momentum and position uncertainties . . . . .	1543
16.4	Observable quantities, probability distributions, and uncertainties . . . .	1544
16.5	The simple harmonic oscillator . . . . .	1550
16.5.1	Bound system: quantization of energy . . . . .	1551
16.5.2	Digression: the continuous and the discrete . . . . .	1552
16.5.3	Harmonic oscillator: the uncertainty principle at work . . . . .	1553
16.6	Time evolution of states . . . . .	1556
16.7	Superposed states in quantum theory . . . . .	1558
16.8	Mixed states: incoherent superposition . . . . .	1559
16.9	Black body radiation: Planck's hypothesis . . . . .	1560
16.9.1	Harmonic oscillators in thermal equilibrium . . . . .	1564
16.10	Bohr's theory of the hydrogen atom . . . . .	1566
16.10.1	The hydrogen spectrum . . . . .	1567
16.10.2	Bohr's postulates and the hydrogen spectrum . . . . .	1569
16.10.3	Bohr's theory and the quantum theory of the atom . . . . .	1572
16.10.4	The hydrogen spectrum: mechanism . . . . .	1574
16.11	Applications of Bohr's theory . . . . .	1576
16.12	Bound and unbound systems: standing and traveling waves . . . . .	1577
16.13	Photoelectric effect: Einstein's theory . . . . .	1578
16.13.1	Features of photoelectric emission . . . . .	1579
16.13.2	The role of photons in photoelectric emission . . . . .	1581
16.13.3	Bound systems and binding energy . . . . .	1582
16.13.4	The basic equation for photoelectric emission . . . . .	1585
16.14	The Compton effect . . . . .	1589

16.15	Quantum theory goes deep: particles and fields . . . . .	1593
<b>17</b>	<b>Relativity: the special and the general theory</b>	<b>1596</b>
17.1	Relativity: Introduction . . . . .	1596
17.1.1	Introduction: frames of reference, inertial frames . . . . .	1596
17.1.2	Introduction: the Galilean principle of equivalence . . . . .	1597
17.1.3	Introduction: the non-relativistic and the relativistic . . . . .	1598
17.1.4	Introduction: the equivalence principles . . . . .	1600
17.2	The special theory of relativity . . . . .	1601
17.2.1	Inertial frames and the velocity of light . . . . .	1601
17.2.2	The Lorentz transformation formulae . . . . .	1602
17.2.3	Space-time interval . . . . .	1606
17.2.4	Lorentz transformation: the general form . . . . .	1609
17.2.5	Consequences of the Lorentz transformation formula . . . . .	1613
17.2.5.1	Relativity of simultaneity . . . . .	1615
17.2.5.2	Lorentz contraction . . . . .	1616
17.2.5.3	Time dilatation . . . . .	1619
17.2.5.4	Velocity transformation . . . . .	1622
17.2.5.5	Relativistic aberration . . . . .	1625
17.2.6	Space-time diagrams and world lines . . . . .	1626
17.2.6.1	Representation of events and world lines . . . . .	1626
17.2.6.2	The space-time diagram and Lorentz transformations . . . . .	1628
17.2.6.3	The invariant regions . . . . .	1630
17.2.6.4	Time-like and space-like separations . . . . .	1632
17.2.7	Space-time geometry . . . . .	1633
17.2.7.1	Geometry in '1+1' dimensions . . . . .	1633
17.2.7.2	The (1+3)-dimensional space-time geometry . . . . .	1636
17.2.8	Physical quantities as four-vectors . . . . .	1638
17.2.8.1	Vectors: the basic idea . . . . .	1638
17.2.8.2	Four-vectors . . . . .	1641
17.2.8.3	Four-vectors and tensors: a primer . . . . .	1642

## CONTENTS

17.2.8.4	The velocity four-vector . . . . .	1649
17.2.8.5	Relativistic mass, relativistic momentum, and relativistic energy . . . . .	1651
17.2.8.6	The energy-momentum four-vector . . . . .	1654
17.2.8.7	The Döppler effect . . . . .	1656
17.2.8.8	The force four-vector . . . . .	1660
17.2.9	The electromagnetic field as a tensor . . . . .	1663
17.3	The general theory of relativity: a brief introduction . . . . .	1667
17.3.1	Introduction: the general principle of equivalence . . . . .	1667
17.3.2	Tensor fields . . . . .	1670
17.3.3	Einstein's equation for the metric tensor . . . . .	1672
17.3.4	Equation of motion in a gravitational field . . . . .	1674
17.3.5	Gravitation and the electromagnetic field . . . . .	1675
17.3.6	The Schwarzschild solution . . . . .	1676
17.3.7	Schwarzschild solution: a few consequences . . . . .	1679
17.3.7.1	The Newtonian limit . . . . .	1679
17.3.7.2	Gravitational time dilatation and red shift . . . . .	1680
17.3.7.3	Black holes . . . . .	1683
17.3.8	The general theory of relativity: the classical and the quantum	1684
<b>18</b>	<b>Atoms, Nuclei, and Molecules</b>	<b>1686</b>
18.1	Introduction . . . . .	1686
18.2	The atomic nucleus: atomic volume and mass . . . . .	1687
18.3	Single-electron states . . . . .	1689
18.3.1	Single-electron states: elliptic orbits and degeneracy . . . . .	1691
18.3.2	Single-electron states: space quantization . . . . .	1694
18.3.3	Single-electron states: electron spin . . . . .	1695
18.3.4	Single-electron states: summary and notation . . . . .	1697
18.4	Building up the atom . . . . .	1698
18.4.1	Electronic configuration and electron shells . . . . .	1698
18.4.2	Electronic configurations and the periodic table . . . . .	1702

18.5	The atom as a whole . . . . .	1703
18.5.1	Screening of the nuclear charge . . . . .	1703
18.5.2	Quantum theory of atomic states: a brief outline . . . . .	1706
18.5.2.1	The indistinguishability principle and its consequences . . . . .	1706
18.5.2.2	Electron-electron interaction: the central field . . . . .	1708
18.5.2.3	Electron-electron interaction: the spin-dependent residual term . . . . .	1710
18.5.2.4	Spin-orbit coupling: excited states of sodium and magnesium . . . . .	1711
18.5.3	The atom as a whole: summary and overview . . . . .	1716
18.6	Continuous and characteristic X-ray spectra . . . . .	1717
18.6.1	Bohr's theory and X-ray spectra . . . . .	1719
18.7	Atomic spectra . . . . .	1723
18.8	Physics of the atomic nucleus . . . . .	1725
18.8.1	The atomic number and the mass number . . . . .	1725
18.8.2	The nucleon: internal characteristics . . . . .	1725
18.8.3	The interaction force between nucleons . . . . .	1727
18.8.3.1	The saturation property of nuclear forces . . . . .	1729
18.8.3.2	The nucleus as a liquid drop: nuclear radius . . . . .	1731
18.8.4	Nuclear binding energy and mass: nuclear stability . . . . .	1733
18.8.4.1	The mass-energy equivalence principle . . . . .	1733
18.8.4.2	Units for nuclear masses . . . . .	1734
18.8.4.3	Relating nuclear mass to binding energy . . . . .	1735
18.8.4.4	Binding energy and nuclear stability . . . . .	1736
18.8.5	The binding energy curve . . . . .	1737
18.8.5.1	The starting point . . . . .	1737
18.8.5.2	Finite size effect: the surface correction . . . . .	1739
18.8.5.3	The effect of the nuclear charge . . . . .	1740
18.8.5.4	Other corrections: the mass formula . . . . .	1740
18.8.5.5	The graph . . . . .	1742

18.8.6	Single particle and collective nuclear excitations . . . . .	1744
18.8.7	Radioactive decay . . . . .	1747
18.8.7.1	Alpha decay . . . . .	1748
18.8.7.2	Beta decay . . . . .	1750
18.8.7.3	Gamma decay . . . . .	1754
18.8.7.4	Radioactive decay law . . . . .	1755
18.8.7.5	Successive radioactive disintegrations . . . . .	1757
18.8.8	Nuclear reactions . . . . .	1758
18.8.8.1	Introduction: examples of nuclear reactions . . . . .	1758
18.8.8.2	Conservation principles in nuclear reactions . . . . .	1760
18.8.8.3	Energy balance in nuclear reactions . . . . .	1760
18.8.8.4	Nuclear fission . . . . .	1762
18.8.8.5	Nuclear fusion . . . . .	1764
18.8.9	Introduction to elementary particles . . . . .	1766
18.8.9.1	The classification of elementary particles . . . . .	1767
18.8.9.2	Elementary particles and quantum numbers . . . . .	1768
18.8.9.3	Anti-particles . . . . .	1771
18.8.9.4	The quark structure of elementary particles . . . . .	1771
18.8.9.5	The basic interactions . . . . .	1772
18.8.9.6	The conservation principles . . . . .	1774
18.8.9.7	The mediating particles . . . . .	1775
18.8.9.8	Symmetries and the conservation laws . . . . .	1777
18.8.9.9	The Higgs field and the Higgs boson . . . . .	1777
18.9	The physics of molecules . . . . .	1778
18.9.1	The binding of atoms in molecules: molecular bonds . . . . .	1779
18.9.1.1	The ionic bond . . . . .	1779
18.9.1.2	The covalent bond . . . . .	1780
18.9.1.3	The hydrogen bond . . . . .	1783
18.9.2	Stationary states of molecules: molecular excitations . . . . .	1785
18.10	From molecules to solids . . . . .	1790

<b>19 Electronics</b>	<b>1792</b>
19.1 Introduction . . . . .	1792
19.2 Electrical properties of semiconductors . . . . .	1794
19.2.1 Energy bands of electrons in a crystal . . . . .	1794
19.2.2 The filling up of the bands . . . . .	1797
19.2.3 The valence- and the conduction bands . . . . .	1798
19.2.4 Electrochemical potential and the Fermi level . . . . .	1802
19.2.5 Energy bands: summary . . . . .	1804
19.2.6 Conductors, insulators, and intrinsic semiconductors . . . . .	1805
19.2.7 Doped semiconductors . . . . .	1807
19.2.8 Intrinsic and doped semiconductors: summary . . . . .	1812
19.3 The p-n junction diode . . . . .	1812
19.3.1 The junction diode: structural features . . . . .	1813
19.3.2 The junction diode at thermal equilibrium . . . . .	1814
19.3.3 The junction diode in forward and reverse bias . . . . .	1818
19.3.4 Junction diode: current-voltage graph . . . . .	1819
19.3.5 Junction diode: summary . . . . .	1821
19.3.6 The diode as rectifier . . . . .	1823
19.3.7 Special-purpose diodes . . . . .	1826
19.3.7.1 The Zener diode . . . . .	1827
19.3.7.2 The light emitting diode . . . . .	1830
19.3.7.3 The laser diode . . . . .	1831
19.4 The bipolar junction transistor . . . . .	1833
19.4.1 The emitter, the base, and the collector . . . . .	1834
19.4.2 The two-diode model of the transistor . . . . .	1835
19.4.3 Transistor currents and voltages . . . . .	1836
19.4.4 The transistor in the active mode . . . . .	1836
19.4.5 The transistor in the saturation and cut-off modes . . . . .	1838
19.4.6 Transistor characteristics . . . . .	1838
19.4.7 The parameters $\alpha$ and $\beta$ of the transistor . . . . .	1842
19.4.8 Convention for using notations . . . . .	1844

19.4.9	The common emitter input impedance . . . . .	1845
19.4.10	AC transistor operation: summary . . . . .	1846
19.4.11	Voltage amplification . . . . .	1846
19.4.11.1	DC bias: the Q-point . . . . .	1847
19.4.11.2	Blocking and bypass capacitors . . . . .	1849
19.4.11.3	AC operation of the amplifier: voltage gain . . . . .	1850
19.5	The operational amplifier (Op-amp) . . . . .	1853
19.5.1	The differential amplifier . . . . .	1853
19.5.2	Op-amp basics . . . . .	1855
19.6	Oscillators . . . . .	1858
19.7	Introduction to digital electronics . . . . .	1859
19.7.1	Boolean algebra . . . . .	1860
19.7.1.1	Digital circuits and binary numbers . . . . .	1861
19.7.1.2	Combinational and sequential circuits . . . . .	1861
19.7.2	The basic logic gates . . . . .	1862
19.7.2.1	The OR and AND gates with diodes . . . . .	1864
19.7.2.2	The NOT gate with a transistor . . . . .	1866
19.7.3	Logic families . . . . .	1867
19.7.4	The Exclusive-OR, NOR, and NAND gates . . . . .	1868
19.7.5	Boolean identities and Boolean expressions . . . . .	1869
19.7.5.1	De Morgan's identities . . . . .	1869
19.7.6	The binary numbers. Binary arithmetic . . . . .	1871
19.7.6.1	The Decimal, Binary, Octal, and Hex systems . . . . .	1871
19.7.6.2	Bits and Bytes . . . . .	1872
19.7.7	Eight-bit arithmetic . . . . .	1873
19.7.7.1	1's complement and 2's complement . . . . .	1873
19.7.7.2	Addition and subtraction in 8-bit arithmetic . . . . .	1874
19.7.7.3	Overflow and carry . . . . .	1875
19.7.7.4	Binary multiplication and division . . . . .	1876
19.7.8	The adder . . . . .	1877

## CONTENTS
